Professional Summary

AI & Data Science undergraduate building real-world ML systems focused on time-series analysis and real-time inference. Developed seismic models on 1.2M+ signals and IoT-based safety systems. Experienced in Python, PyTorch, FastAPI, and system design.

Education

B.Tech — Computer Science (AI & DS) 2024 – 2028
Panipat Institute of Engineering & Technology (PIET), Panipat CGPA: 7.0/10

Skills

Languages: Python, SQL
ML/Data: NumPy, Pandas, Scikit-learn, PyTorch
Backend: FastAPI
Visualization: Power BI, Excel
Tools: Git, GitHub
Concepts: Model Deployment, Signal Processing, Time-Series Analysis

Experience

Project Lead — Life-Link Network (Tech Syndicate) 2025 – Present

- Built off-grid LoRa + ESP32 communication system enabling emergency alerts in zero-network environments
- Designed real-time SOS pipeline with automated alert escalation and multi-level monitoring
- Designed low-latency communication pipeline for real-time multi-sensor data transmission

Data Analyst Intern — Pickl.AI Jul 2025 – Aug 2025

- Built Power BI dashboards tracking sales, profit, and regional performance
- Created DAX measures, filters, and KPIs for dynamic insights
- Identified top-performing products and regions from business data

Data Analyst Intern — Global Next Consulting Aug 2025 – Sep 2025

- Performed exploratory data analysis on structured datasets
- Identified patterns and trends to support business insights
- Worked on data cleaning and preprocessing workflows

Projects

Multi-task Earthquake Prediction System

- Built deep learning system for seismic classification, magnitude estimation, and P-wave prediction
- Trained on STEAD dataset with 1.2M+ waveform signals (6000×3 input)
- Designed Conv1D multi-head architecture for classification and regression tasks
- Developed preprocessing pipeline with filtering, normalization, and segmentation
- Achieved 95.8% classification accuracy and 0.93 F1-score with 95 ms real-time inference latency

Off-grid SOS & Tracking System

- Developed LoRa + ESP32 based emergency communication system for remote environments
- Integrated environmental sensors for monitoring and alert triggering
- Designed backend workflow for SOS alerts using APIs and automation

Jarvis AI Assistant System

- Built modular AI assistant for real-time task execution using command-based pipelines
- Designed command parsing and execution pipeline for structured task automation
- Designed modular architecture separating command parsing, execution, and response handling

Achievements

- 2nd Prize — Semixthon, Delhi Technological University — 20k
- Top 15 among 487+ teams — CGC Mohali Hackathon
- 7th Rank — Graph-e-thon 3.0, Graphic Era University
- Received 50k incubation support for Life-Link Network
- Presented project at India Innovates, Bharat Mandapam

Certifications

- Oracle Cloud Infrastructure 2025 Certified Generative AI Professional — Oracle
- Data Analytics with Generative AI — Simplilearn (2025)
- Data Analytics Internship — Pickl.AI (2025)
